| PROFESSIONAL EXPERIENCE | ORCA Hub <i>Research Associate</i> | Jan. 2019 - Present Edinburgh, United Kingdom |
|-------------------------|--|--|

- Deployed a real-time computer vision system on a remotely operated underwater vehicle for the surveying and inspection of offshore assets (ROS, C++).
- Implemented Visual Simultaneous Localisation And Mapping (SLAM) solution for limited visibility underwater environments, based on data fusion from acoustic and optical sensors.
- Employed stereo cameras for 3D reconstruction of submerged structures, enabling the offshore industry to inspect and certify their integrity.
- Designed, set-up, and executed practical experiments and prototype systems relating to the demonstration of solution capabilities to industry representatives.

- Characterised Alzheimer disease using Magnetic Resonance Imaging (MRI), performing texture analysis in the hippocampus tissue enabling the diagnose the disease at various stages.
- Combined brain gyrus segmentation with regional texture metrics (Pandas).
- Applied machine learning to image texture, including feature selection, classification and regression techniques (Python, Scikit-Learn).

- Magnetic Resonance Imaging (MRI) applied to characterisation of liver diseases, by extraction of features relevant for disease diagnosis (MATLAB).
- Performed statistical analysis using linear regression on volume data sets to obtain parametric maps of apparent diffusion coefficients from diffusion-weighted MRI.
- Implemented image processing algorithms, including a gray level-based iterative segmentation that applies a threshold derived from histogram analysis.
